

Appl. No. 10/629,081
Amdt. dated July 11, 2005
Reply to Office action of April 12, 2005

Amendments to the Specification:

Please replace the paragraph beginning at page 5, line 4, with the following rewritten paragraph:

The ridge member 14 has a convex outer side wall 51 and a concave inner side wall 52. The inner side wall 52 defines a space or concavity 53. The web piece 16 is located in the concavity 53 and urges the ridge member 14 against the rim 19. As may be seen most clearly in Fig. 4, the uppermost planar surface of the ridge member 14 extends between the upper end and the lower end and slopes downwardly from the convex outer wall 51 to the concave inner wall 52.
